

Synchronizing Item Data with SUPERVALU

1. **Cleanse your data and load all items to your Data Pool (register Items in GS1 Global Registry)**
2. **Contact SUPERVALU at datasync@supervalu.com to complete the Trading Partner Data Sheet and begin the publication process**
3. **Publish a limited number of GTINs as an Initial Load in the production environment**
 - If corrections are necessary, fix errors and republish as Initial Load
 - If data passes validations, complete an initial load for all items to each division GLN
 - The GLN list can be found at www.1SYNC.org/supervalu
4. **Manage Confirmation (CIC) responses from SUPERVALU**
 - REVIEW – Pack Mismatch – SV will be in contact with you to resolve
 - REVIEW – Division Not Found – The item is not setup in the DC it was published to
 - ACCEPT: New item has been successfully setup in system
 - SYNCHRONIZED: Item has been successfully updated in system
 - REJECT: UPC Not Found (item does not exist); contact SV if item is supplied to any SV DC
5. **Send ongoing new items and item maintenance notifications through your Data Pool to each SUPERVALU division GLN**
